

CASE STUDIES

Monteagle
Sunday School Assembly

Habersham

Griffin Park

Saunders Branch

These four communities selected provide a broad range of Light Imprint applications. They offer a variety of conditions based on topography, soil, drainage, and development status. Settings range from the historic precedent of Monteagle that uses Light Imprint tried and test tools. There is Habersham with its relatively flat, coastal topography enhanced by wetlands and sandy soil, and its nearly complete status. The rolling hills of Griffin Park, crisscrossed with creeks and rivers, have clay soils; the development is new and under construction. Saunders Branch, located on steep mountain slopes with bluffs and ravines, has rocky soils; it is new and planned.
